WHAT IS FRIDAYS FOR FUTURE ?

Fridays for future is a young people's global movement. Followers of this movement organise school strikes and protest against climate change. They encourage other students to protest in public places on Fridays instead of going to school. They want international governments and citizens everywhere to take action they are tired of governments talking about environmental problems and not finding solutions. They want governments to follow the Paris agreement and to listen to scientists.

KEY WORDS:
CLIMATE CHANGE: changes in the earth's

temperature and weather patterns and weather, primarily due to human behavior.

PARIS AGREEMENT:

An international treaty on climate change. 195 countries plus the European Union signed the treaty in 2015.

HOW DID IT START ?

In 2018 Greta Thunberg, a 15-years-old Swedish schoolgirl, sat outside her country's parliament every day for three weeks. She wanted the Swedish government to take real actions against climate change so she went on strike and didn't go to school. Journalist from all over the world took photos of her and her school strike placard. She was alone at first but soon other students joined her. They created the hashtag #FridaysForFuture and asked students in other countries to protest too.

The Fridays for Future movement continues to work hard and put pressure on governments to meet their commitment to the Paris Agreement.
